ORANGE PILL YOUR FAMILY · HOLIDAY EDITION

Know your table.

Five relatives, five first answers. Lead with a question, keep it short, then hand them the one-pager.

THE SKEPTIC

"It's a scam. It's backed by nothing."

YOU SAY

"Fair question. What backs the dollar? Bitcoin is backed by fixed rules nobody can change and a network nobody can shut off. Want the short version?"

Skip: arguing price or calling them a nocoiner.

THE CRYPTO COUSIN

"Bitcoin's old news. I'm in the new coin."

YOU SAY

"Who controls that one? Bitcoin's the only one with no company or founder calling the shots. And are the keys yours or the exchange's?"

Skip: lecturing. Ask questions instead.

THE WORRIER

"I'd be terrified of losing it all."

YOU SAY

"Smart instinct. Nobody should put in money they can't afford to see drop. Most people start with a few dollars just to learn how it works."

Skip: telling them they're missing out.

THE ECO NIECE

"Doesn't Bitcoin waste a ton of energy?"

YOU SAY

"It uses real energy, on purpose: that's what secures it. And miners chase the cheapest power, which is often wasted energy like flared gas or surplus hydro."

Skip: dismissing it or quoting stats you can't source.

THE GRANDPARENT

"I don't understand any of it."

YOU SAY

"Think of it as digital gold. There's a fixed amount, and nobody can print more, so it can't be watered down like money in the bank."

Skip: jargon. Blockchain, mining, wallets.

Three rules for the table

1. **Ask before you tell.** A good question beats a good argument.
2. **Keep it under a minute.** One answer, then stop talking.
3. **Hand them the sheet.** Let the printable and the video do the rest.

Send them: **bitcoinwell.com/holidays**

For educational purposes only. Not financial, investment, or tax advice. Bitcoin is volatile and you can lose money.

BITCOIN WELL
